Vice Principal AI — Setup Checklist

Project folder: `C:\personal-ai-assisstant` · Full details: `server\README.md` · Steps 1–2 ≈ 15 min, step 3 ≈ 20 min

1. Create the settings file

- ☐ Open PowerShell and open the settings file (it already exists — do **not** copy .env.example over it):

```
cd C:\personal-ai-assisstant\server
notepad .env
```

- ☐ `APP_ACCESS_PIN=` a PIN of 6+ digits (only you and Uma know it)
- ☐ `SCHOOL_NAME=` the school's name
- ☐ `VAPID_SUBJECT=` change to `mailto:` + your email

Already filled in for you: `TOKEN_ENCRYPTION_KEY`, `VAPID_PUBLIC_KEY`, `VAPID_PRIVATE_KEY` — leave them as they are.

2. Claude key — turns on the assistant

- ☐ Go to **console.anthropic.com** → sign in → add billing
- ☐ API Keys → **Create Key**
- ☐ Paste it into `.env` as `ANTHROPIC_API_KEY=`

3. Gmail and Drive — Google Cloud (≈ 20 min)

- ☐ Go to **console.cloud.google.com** → create a project (e.g. "VP Assistant")
- ☐ APIs & Services → Library → enable **Gmail API** and **Google Drive API**
- ☐ OAuth consent screen: **Internal** if the school email is Google Workspace; otherwise **External** + add Uma's email as a test user (External = she signs in again every 7 days)
- ☐ Credentials → Create credentials → OAuth client ID → **Web application**
- ☐ Add this redirect URI exactly:

```
http://localhost:4000/api/google/oauth/callback
```

- ☐ Copy the client ID and secret into `GOOGLE_OAUTH_CLIENT_ID=` and `GOOGLE_OAUTH_CLIENT_SECRET=`

4. Load the new settings

The app already runs in the background (it starts with Windows). After editing `.env`, restart it:

```
npm.cmd run service:restart
```

- ☐ Open **http://localhost:4000** and enter the PIN

Use `npm.cmd`: a stray empty file `C:\Windows\System32\npm` hides the normal `npm` in PowerShell.

5. Set it up on the page

- ☐ **Connections** → Connect Google account → sign in with the school account (and her personal one if needed)
- ☐ **Messages** → **Contacts and groups** → add "Parents group", "Teachers group" and key staff
- ☐ **School calendar** → paste the Drive link of the calendar file, or upload it
- ☐ **Talk to your assistant** → try: "Remind me in 5 minutes to check the attendance"

6. Tell Claude it's running

- ☐ Ask for a live check of the assistant, sending an email, reading a Drive file and the calendar

Later — before Uma uses it on her phone

- ☐ **Hosting:** an always-on computer or server with an **https** address (notifications need https)
- ☐ On her phone: open the https address in Chrome → menu → **Install app** (icon on her home screen)
- ☐ Then in the app → Connections → **Turn on notifications on this phone**
- ☐ Uma tests each feature (the spec requires it before each phase is signed off)

Notes Google account used: _____ Date set up: _____

Never write the PIN or keys on this sheet. Keep the `.env` file private — never share or upload it.
